Princeton Frontiers in Physics is a new series of short introductions to some of today's most exciting and dynamic research areas across the physical sciences. Written by leading specialists, these stimulating books address fundamental questions that are challenging the limits of current knowledge. Joshua S. Bloom's *What Are Gamma Ray Bursts* is the second book in the Princeton University Press Frontiers in Physics Series. It shares the same concise and compact format as the earlier volume on the First Stars and Galaxies in the Universe, together with the same annoyingly small type hecfran-modelismo.coms: 4. Gamma-ray bursts are the brightest--and, until recently, among the least understood--cosmic events in the universe. Discovered by chance during the cold war, these evanescent high-energy explosions confounded astronomers for decades. Gamma-ray bursts are the brightest--and, until recently, among the least understood--cosmic events in the universe. Discovered by chance during the cold war, these evanescent high-energy explosions confounded astronomers for decades. *What Are Gamma-Ray Bursts?* is a succinct advent to this fast-growing topic, written through an astrophysicist who's on the vanguard of modern day study into those extraordinary cosmic phenomena. Joshua Bloom offers readers a concise and obtainable review of gamma-ray bursts and the theoretical framework that physicists have built to make feel of advanced observations around the electromagnetic spectrum. our search for the answers? To find out, check out the short, sophisticated introductions in Princeton Frontiers in Physics. Abraham Loeb's *How Did the First Stars and Galaxies Form?* and Joshua Bloom's *What Are Gamma-Ray Bursts?* are the first of many new titles that are forthcoming in this exciting series.

All original research articles of the highest quality, reporting experimental or theoretical results in these aspects of nuclear physics, are welcomed in Frontiers in Physics, section Nuclear Physics.
