The field of C-nanoparticles toxicity is, at present, fragmented and contradictory, oscillating between enthusiastic raptures and bitter disappointments.

Carbon-nanotubes based nanostructures (C-nanotubes) in particular are viewed as a class of nanomaterials with high potential for biological appli- cations due to their unique mechanical, physical and chemical properties. The book provides an exhaustive account of C-nanotubes toxicity, mechanisms of toxicity and biocompatibility towards human and animal organisms as well as the entire biological environment. The detailed description of the physicochemical properties of these nano-objects will help facilitate discussion on their future applications in the biomedical field.
