This graduate text, based on years of teaching experience, is intended for first or second year graduate students in pure mathematics. The main goal of the text is to show how the computer can be used as a tool for research in number theory through numerical hecfran-modelismo.com: Fernando Villegas.

The aim of the Oxford Graduate Texts Series is to publish textbooks suitable for graduate students in mathematics and its applications. The level of books ranges from some suitable for advanced undergraduate courses at one end, to others of interest to research workers. This book is a revised and greatly expanded version of our book Elements of Number Theory published in As with the first book the primary audience we envisage consists of upper level undergraduate mathematics majors and graduate students. This graduate text shows how the computer can be used as a tool for research in number theory through numerical experimentation. Examples of experiments in binary quadratic forms, zeta functions of varieties over finite fields, elementary class field theory, elliptic units, modular forms, are provided along with exercises and selected solutions.
